February 2, 2001

One needs the functions from mathmlPlot in examples/.

```
[*]
inFile <- system.file("data/mathmlQuadratic.xml","XML")
d <- xmlTreeParse(inFile)
plot(1:10, type="n")
text(5,5, mathmlPlot(d))

[]
u <- xmlTreeParse("data/mathmlRoot.xml")
text(5,7,mathmlPlot(u))

[]
u <- xmlTreeParse("data/mathmlSet.xml")
text(5,9,mathmlPlot(u))</pre>
```
