## Memory Management in the the XML Package

Duncan Temple Lang, University of California at Davis

## **Abstract**

We describe some of the complexities of memory management in the XML package. We outline various strategies that the R programmer can use with this package to make computations more efficient. We also explain how to reason about managing nodes and documents in this and related packages (e.g. Sxslt).

Memory Management in the the XML Package

| IV. | lemory Management in | the the XML Package |      |
