${\tt April~7,~2005} \\ {\tt MathML.nw} \\ {\tt 1}$ 

```
One needs the functions from mathmlPlot in examples/.
       ⟨* 1a⟩≡
1a
          inFile <- system.file("data/mathmlQuadratic.xml","XML")</pre>
          d <- xmlTreeParse(inFile)</pre>
          plot(1:10, type="n")
          text(5,5, mathmlPlot(d))
1b
       ⟨ 1b⟩≡
          u <- xmlTreeParse("data/mathmlRoot.xml")</pre>
          text(5,7,mathmlPlot(u))
       \langle 1b \rangle + \equiv
1c
          u <- xmlTreeParse("data/mathmlSet.xml")</pre>
          text(5,9,mathmlPlot(u))
       \langle 1b \rangle
       \langle * 1a \rangle
```
